

Lab Three: Using Local Help Systems in RHEL 9

Section 1: Finding Information in Local Linux System Manual Pages

1. **Question:** What command do you use to access the manual pages for any Linux command? ' Answer: **man or info**
2. **Question:** How would you find information about the ls command using the manual pages? Answer: **man ls**
3. **Question:** How can you navigate to the next page and the previous page in a manual entry? Answer: u can use **space bar**, to get to last page **shift+g** , to get first page **g**
4. **Question:** What option allows you to search for a keyword inside a manual page? Answer: **/ <write your char or string>**
5. **Question:** How do you exit the manual page viewer? Answer: press **q**
6. **Bonus Question:** What command do you use to find which section of the manual contains information about a command, when multiple sections exist?

Answer: **man -f <Command>**

Section 2: Using the --help Option

7. **Question:** What is the purpose of the --help option in Linux commands?

Answer: help u to navigate through the options of the command to see what go with

8. **Question:** Use the --help option to display information about the cp command.

What information can you find about using cp? Answer : cp --help

```
→ ~ cp --help
Usage: cp [OPTION]... [-T] SOURCE DEST
or:  cp [OPTION]... SOURCE... DIRECTORY
or:  cp [OPTION]... -t DIRECTORY SOURCE...
Copy SOURCE to DEST, or multiple SOURCE(s) to DIRECTORY.

Mandatory arguments to long options are mandatory for short options too.
-a, --archive                same as -dR --preserve=all
```

9. **Question:** How do you display help information for the mkdir command?

```
→ ~ mkdir --help
Usage: mkdir [OPTION]... DIRECTORY...
Create the DIRECTORY(ies), if they do not already exist.

Mandatory arguments to long options are mandatory for short options too.
-m, --mode=MODE    set file mode (as in chmod), not a=rwx - umask
-p, --parents       no error if existing, make parent directories as needed,
                   with their file modes unaffected by any -m option.
-v, --verbose       print a message for each created directory
-Z                 set SELinux security context of each created directory
                   to the default type
--context[=CTX]    like -Z, or if CTX is specified then set the SELinux
                   or GMPK security context to CTX
```

10. **Bonus Question:** When should you prefer using --help over man pages?

Answer : **when u want fast and short output , Syntax check , no big descriptions**

Section 3: Accessing Red Hat Online Documentation

11. **Question:** How can you access Red Hat's official online documentation from the command line? **Answer:** **there is curl , wget, lynx commands that u can use**

12. **Question:** What is the URL to the Red Hat Enterprise Linux documentation page? **Answer:** **<https://access.redhat.com/documentation>**

13. **Bonus Question:** How does Red Hat online documentation help in troubleshooting RHEL 9 systems compared to local manual pages? **Answer :** **because it goes beyond command syntax and focuses on real-world system issues.**
